

Product information: C₇₀

C₇₀ Fullerene is the “big brother” of C₆₀. It has a much stronger absorption of visible light, which is very advantageous in for example (organic) solar cells. Our C₇₀ has a purity of >99% by HPLC, and is very well suitable for organic synthesis purposes. It is supplied as fine powder and/or crystals, which are easy to handle and dissolve.

Detailed information:

Purity:	>99% by HPLC (360 nm, fullerene content)
CAS number:	115383-22-7
Mw:	840.77 g/mol
Molecular formula:	C ₇₀
Appearance:	fine black or dark brown crystals/powder
Product code:	070F
CoA:	available on request

Note: a small amount of solvent residue may be present in the C₇₀, due to the methods of preparation and purification.
